

ActiveCare Introduces Mid-wheel Drive Wheelchair

COLUMBIA, SC, March 20, 2008 – ActiveCare Medical today announced the launch of its new mid-wheel drive power wheelchair, the Catalina™.

The Catalina is the company's first mid-wheel drive product. It has a 300-pound weight capacity and is Medicare coded K0823.

"We'll put the quality and value of the Catalina up against any other chair in its class," said ActiveCare President and CEO Steve Neese. "We believe the Catalina will become the new industry standard."

The addition of the mid-wheel drive chair gives ActiveCare a product with the added maneuverability and stability that many patients are seeking, Neese said.

The Catalina has an estimated range of 20 miles and a minimum turning radius of only 18 inches.

The Catalina also features a number of options geared toward adding functionality and versatility to the chair. It is available with either 18- or 20-inch wide seats and can be fitted with a bracket to support elevating leg rests (ELRs).

The Catalina is available now and ready to ship from ActiveCare's warehouses in Fort Mill, SC, and Brea, CA.
